He missed a simple diagnosis on a friend. He doesn't show interest in his patients, either. I can't understand why other physicians would recommend him.

What a horrible psychiatrist! He is definately an older, more conservative psychiatrist. Surprised he is able to find work in San Francisco. He continually interrupts, and then interrupted me when I asked him to stop interrupting me.

He was extremely insensitive when I began talking about my traumatic past. I was forced to leave the appt early, he was so rude.

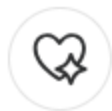

There are so many good psychiatrists in San Francisco, don't waste time on him. You'll end up leaving him anyways, just saving you some time.

This guy got distracted by his iPhone multiple times while taking my history. Enough said.

Saw this guy one time, never again. He sent me for tests, didn't bother to follow up, and ignored a written request for my medical records. This guy must be too busy being an expert witness in court cases to respond.

The front desk assistant is cold and not friendly at all. I've had chronic pain for years and Dr. Strassberg told me that he couldn't come up for a reason for it so it must be psychological. Very old school thought that if he didn't know the answer, I must be making it up.

This creep makes most of his money doing independent medical reviews on accident victims with legitimate accident claims and he lies to get the insurance company out of the claims. He asks very personal questions totally unrelated to an independent medical reviews and also asks questions totally NOT related to either neurology or psychiatry specialties. This sociopath who screws over accident victims needs to be boycotted by everybody, reported to the State Medical Board and to Sutter hospital

He should receive a zero but your rating system doesn't allow it. He is paid to lie so that his client gets out of liability. He has no ethics and should lose his license.

Do not see this doctor if you want honest or accurate treatment.

I'd give negative stars if it was an option. Without elaborating because it would take a book to give the whole story, I'll just get to the point. RUN

I've, unfortunately, been to quite a few specialists over the last 5 years, and Mark was the worst of the worst. "How are you?" I asked, introducing myself. "Oh, just waiting for the weekend", he replied, staring off into the distance. Perhaps I shouldn't have come on a Friday.

He gave me a perfunctory exam, and shrugged his shoulders when I asked about possible issues I might have. Really, Mark? Not one suggestion or idea? Not even a minute or two of analysis?

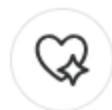

The woman at the front desk is unpleasant to deal with. And I got a bill for a copay a year after my visit. What? I hope this place is a front for some real business they actually care about. I have more respect for a well run meth lab than a shoddy medical practice. Stay far, far away.

I have sat through several of his "exams" of patients performed at the direction of insurance carriers. Every time his report minimizes the injuries, and he often accuses the examinees of being liars or malingerers. Stay away from this guy, whose only mission in life is making money.
